Experiment 10 FAQs

Frequently Asked Questions:

Q: What is UART?

A: A serial communication protocol used to send and receive data between devices.

Q: Why use a circular buffer for UART?

A: It optimizes space and allows continuous data flow without memory shifting.

Q: What happens when the buffer is full?

A: New data is lost or should be managed until space is available.

Q: Is UART synchronous or asynchronous?

A: UART is asynchronous communication.

Q: What is baud rate?

A: The speed of data transfer, measured in bits per second (bps).
